

Department of Applied Mathematics and Computational Sciences
Big Data and Modern Databases - Object Relational DB

V Semester M.Sc Software Systems

Assignment - 2

Objective : **Creating and querying of object relational databases**

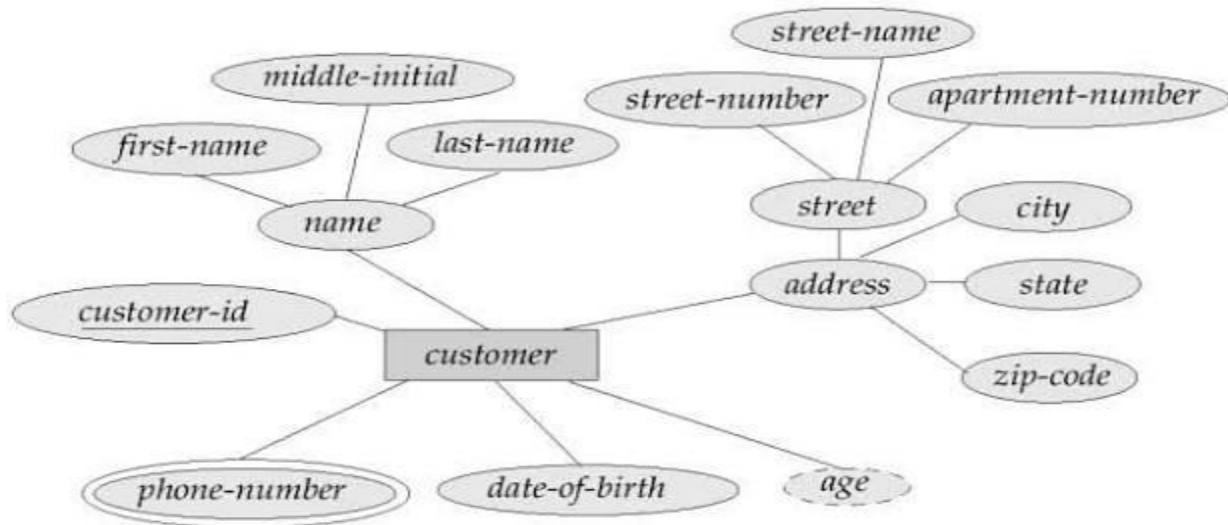

Constructing an Object Relational Database for the following use cases. You are expected to demonstrate structured Type, collections, Type Inheritance, References REF and Nested Relation.

https://docs.oracle.com/cd/A87860_01/doc/appdev.817/a76976/adobjxmp.htm

https://docs.oracle.com/cd/A64702_01/doc/server.805/a58227/ch_ordb.htm

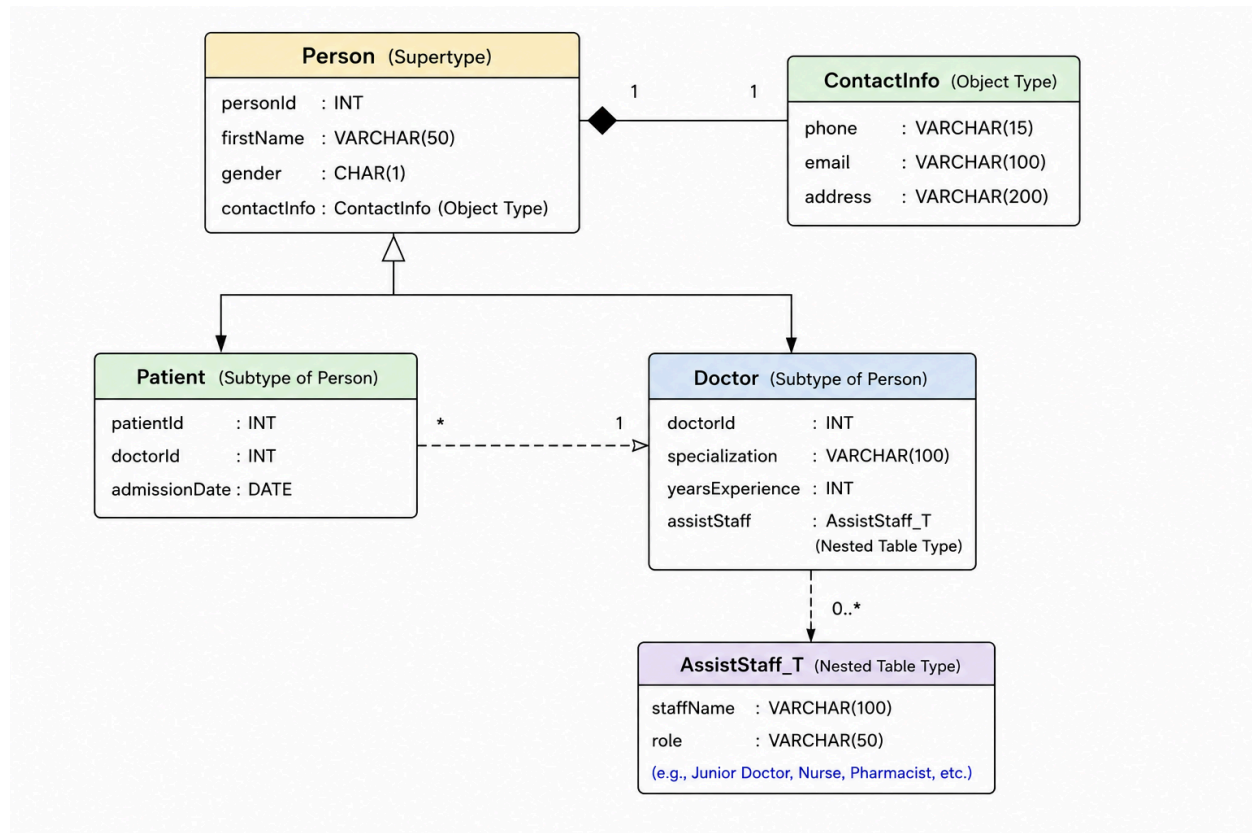

https://docs.oracle.com/cd/A87860_01/doc/appdev.817/a76976/adobjxmp.htm#440189

1. Object Relational data model for the following with Type, Array

1. Create a CUSTOMER_1 table with appropriate column objects.
2. Create CUSTOMER_2 object table holding row objects
3. Insert at least 5 instances into both customer-1 and customer-2
4. Print all the customer details from both tables
5. Fetch the street details of a specific customer id
6. Get the total (count) phone contacts for each customer.
7. Print first name, age of customers who live in 'Tamilnadu' State.

2. Design an object relational data base to manage the Doctor and patients information. Type inheritance, nested table and REF

1. Find the doctor name, contact info of patient 'Siddarth'
2. List the name and contact info of female patients who are attended by Dr.Helen
3. For each doctor, print the number of patients.
4. Which doctor handles the maximum number of patients?
5. List all the assisting staff of Dr.Sam
6. Get the contact details of patients who consult Dr.Roy
